

Summary

The intent of this document is to report on progress made in the Department of Defense Humanitarian Demining R&D Program in developing equipment to assist with the global demining effort. The products contained herein portend significant capabilities for detecting, marking, mapping, clearing, and neutralizing mines, as well as equipment for training, and post clearance quality assurance. This document provides a means for the reader to obtain more information on any item.

Since the program inception in 1995, significant progress has been made and the most successful items have been deployed for field testing in the mine plagued nations of Africa, Central America, Southeast Asia, and Europe. Feedback from users and field tests are crucial to continued success of the program.

The world's landmine problem is far from solved and the Department of Defense is proud to be making a difference. It remains committed to working with international agencies and private relief organizations to eliminate the threat posed by landmines to civilians.

To discuss how to acquire these items directly, or to obtain any of the equipment listed in this guide for field testing through the U.S. Humanitarian Demining Program, contact the OASD(SO/LIC) at the following address:
